Aerosol pentamidine.

AL 721.

Naltrexone.

AZT.

Imuthiol.

If you think you may be infected with HIV, the virus that causes AIDS, then these words mean something very important to you:

Treatment.

Treatment isn't just for people with AIDS. New treatments are now available that may help all infected people even if you don't have any symptoms. The Columbia Gay Health Advocacy Project is sponsoring a ground-breaking public discussion of early treatment for HIV infection, featuring a remarkable panel of AIDS researchers, clinicians, and activists.

AIDS: Improving the Odds

Care and treatment for currently healthy people
who are HIV-infected or at high risk

Tuesday November 17th, 7:30 — 11:00 p.m.
Lecture Halls A and B, Columbia University Law School

Panel

Donald Armstrong, M.D.

Bernard Bihari, M.D.

Michael Callen
